Cooperation Case -PPE vending machine

Epidemic prevention and control

With the fickleness of the new coronavirus, it has caused various impacts on our daily life, and the relevant departments have actively responded to the epidemic prevention measures and invested a lot of manpower and material costs in the prevention and control work. It is easy to realize unmanned 24-hour duty, conduct sales/distribution of epidemic prevention materials, and timely meet the needs of the public for immediate use in public scenes. Contactless self-service is safer and more convenient, and it is also improving the quality of urban civilized services, and intelligence greatly reduces personnel investment. At the same time, it is conducive to the orderly progress of epidemic prevention and control. Dozens of cities across the country have deployed commercial centers, transportation hubs and other public places for epidemic prevention and care at any time, and accompany you and me!

Cooperation Case -Smart Fridge Vending Machine

Smart Fridge vending machine

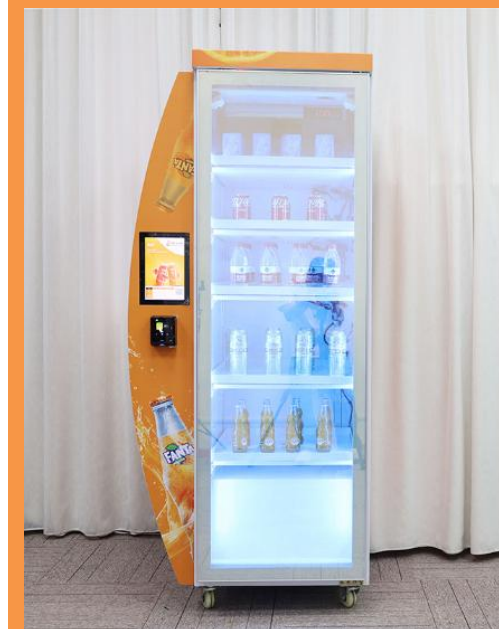

Smart Fridge vending machines are rapidly gaining favor in the European and American markets. With their large-capacity storage, excellent product display effects, convenient replenishment and management methods, as well as low initial investment costs and fast payback cycles, they are becoming the key to the retail industry. A highlight. These smart devices not only optimize operational efficiency, but also meet the demand for an efficient shopping experience in modern fast-paced life. These significant advantages of smart container vending machines make them a highly valued choice for both retailers and consumers, especially in a market environment that pursues instant gratification and convenient services.

CUSTOMIZATION PROCESS

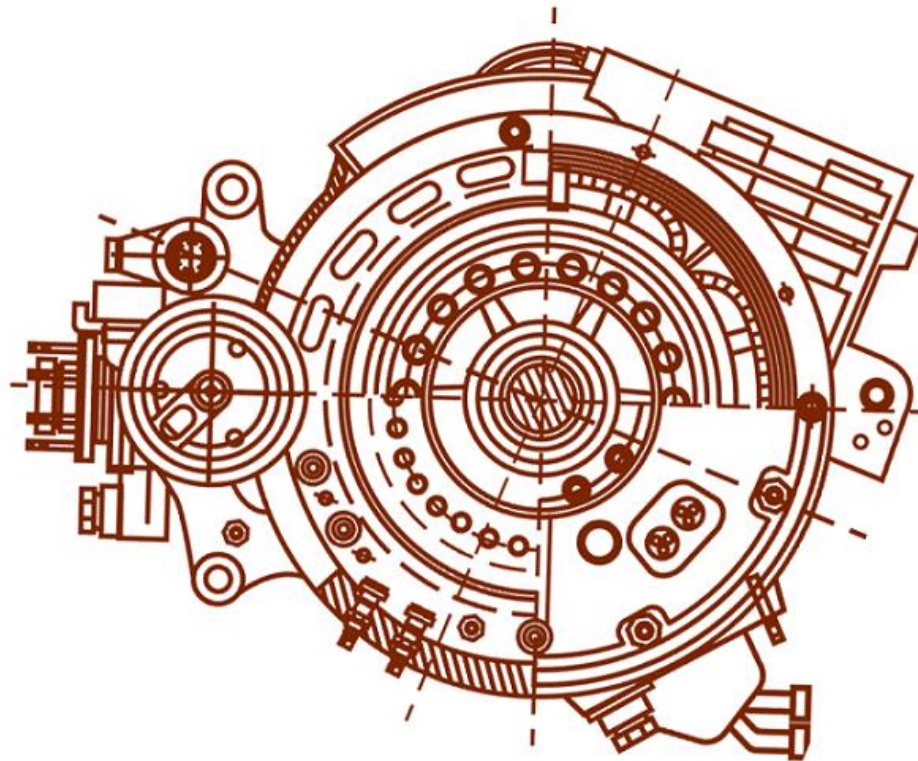

Appearance Design

Based on engineering, aesthetics and economics, conduct 3D model construction, material rendering, and cooperate with lighting effects, shadow effects and surface texture effects to finally complete the appearance design

Internal design of mechanical structure

Make a design and development plan as needed, complete 2D, 3D and other engineering design drawings, and complete the internal mechanical structure design of the model according to the design and development procedures. Analyze the overall design process, comprehensively evaluate and analyze various factors such as size, material, shape, surface, operation, strength, stiffness, etc.

Scircuit Design

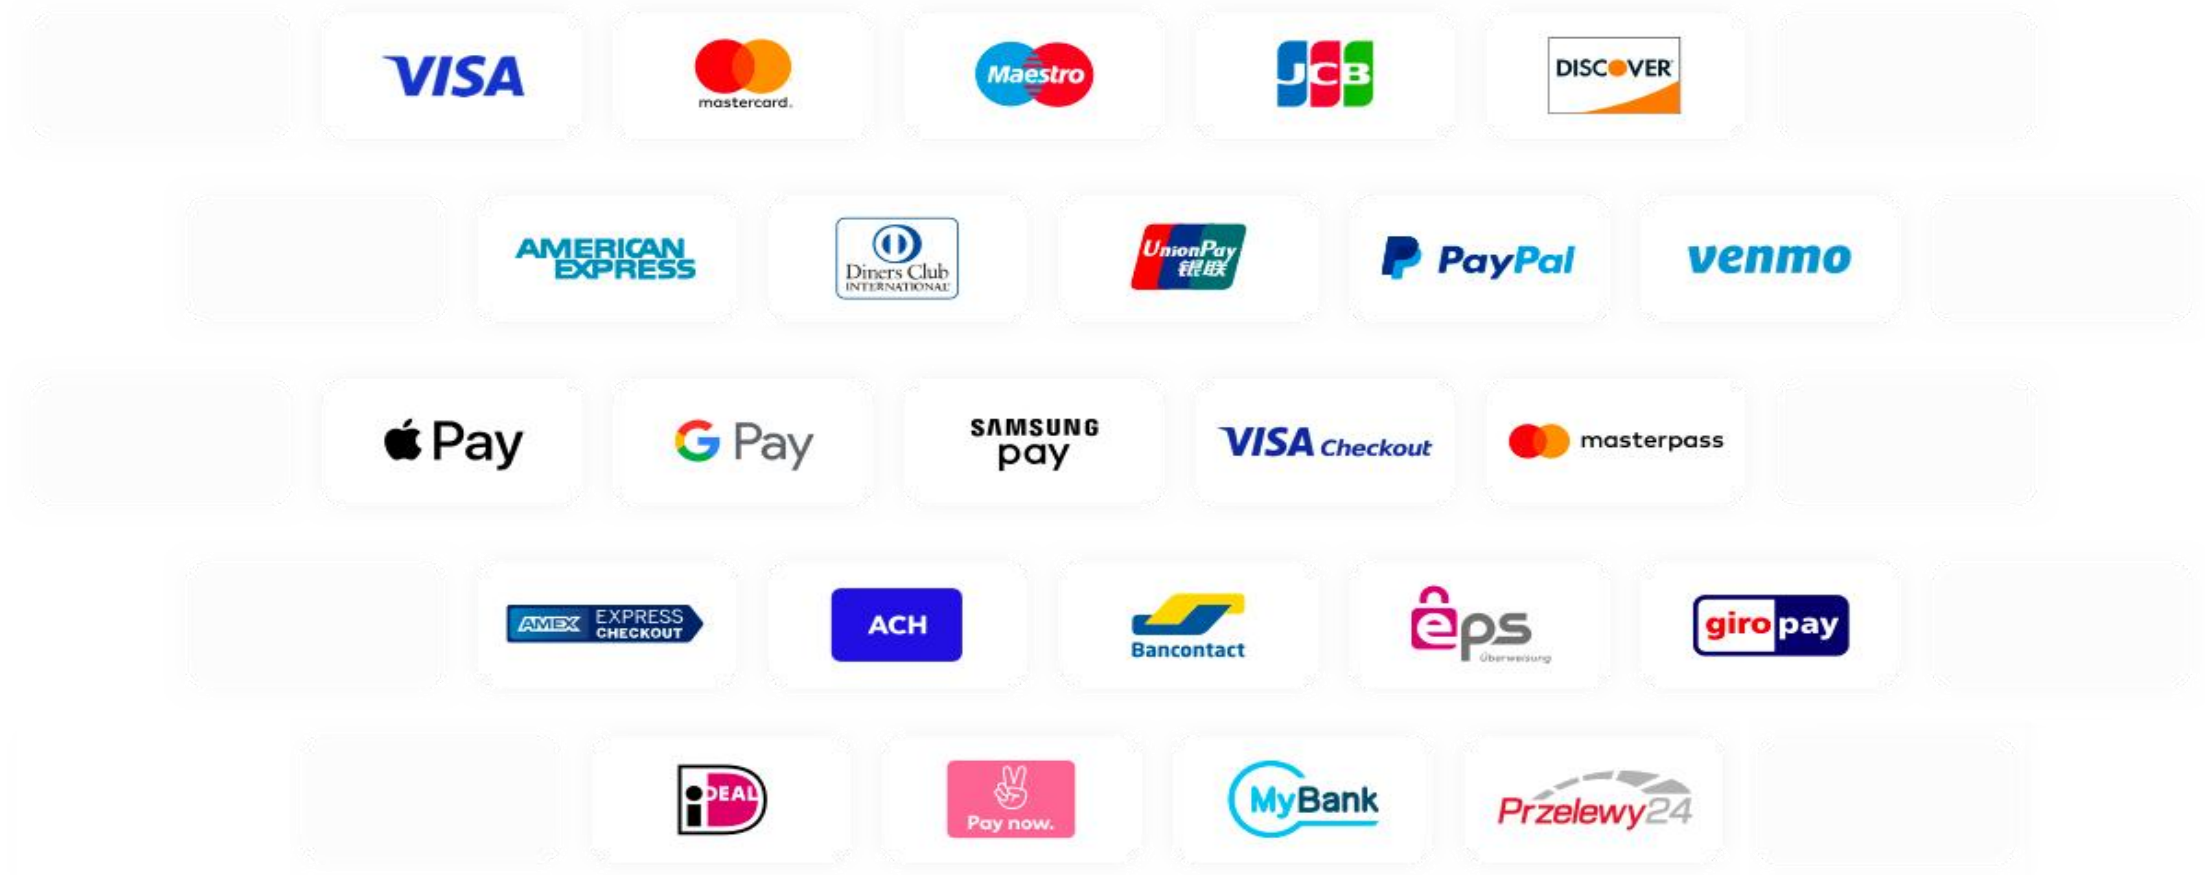

Combining and using the industrial design of modern intelligent electronic chip AI technology, we have independently successfully developed intelligent circuit control boards and embedded programs. Using IT integrated operating systems, we can easily complete a variety of operational automation processes, with very strong scalability and multiple Compatibility!
